

LUNA TECH DESIGNS, LLC

Company Brief

February 15, 2011

ABOUT US

Luna Tech Designs is one of seven Google certified GeoWeb marketing companies in the U.S. This means we have the ability to merge web-based services with the geography of a community through a 3D environment.

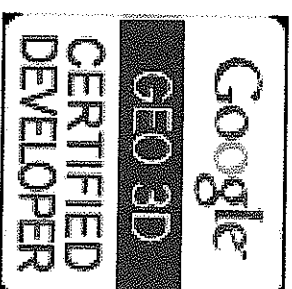

These services are affordable and easily integrated into the existing marketing strategies already in place. The goal is to unify these techniques and bring them into the next level of online advertising.

ABOUT US

Luna Tech Designs...

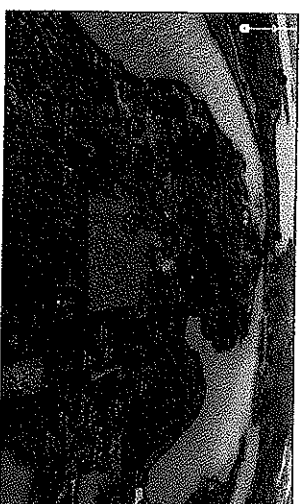

- Founded in January 2008
- Expanded capabilities in June 2008 with the addition of Nicole Dombrowski
- In 2009, began working with the CMU Research Corp SmartZone in Mt. Pleasant, MI
- Became the first in the U.S. to become a Google Certified Geo 3D Developer in July of 2010
- Currently serve as a proctor for the Google Geo 3D Certification Program

UNIQUE CAPABILITIES

The LunaGlobe Virtual Globe Platform offers a unique suite of capabilities that remains unmatched for versatility. No other company researched to date offers our entire set of abilities including:

- Combination of Google Earth/Google Maps/Street View based plug-in mapping application with focus on an individual region, leveraging the virtues of each view, depending on the users' requirements. Rather than simple generic search results populating on a map, the content can be controlled and focused for a specific regions' purpose.
- Fully integrated unique information "pop-up" balloons capable of displaying full multi-media content and entire web pages.
- Manual integration of custom map overlays, legends, and 3D representations of demographic data.
- Full automated inclusion of GIS based data (e.g. ArcGIS)
- Capable of targeting wide range of audiences with a single integrated viewer, from marketing individual businesses, communities, to entire regions, and everything in-between.
- Geographically relevant context of information, so users not only understand the information presented, but where it originates, or where it applies.
- Inclusion of photo-realistic 3D models as a key element for marketing and wayfinding, takes users beyond a 2D street map, and makes them feel as though they have visited a location, in the most intuitive way possible.
- Information is fed to the virtual globe from external sources, and is delivered to the user in the context they wish to discover it, without ever leaving the virtual environment.
